

Math

Selected Student: Danae Devine

Submitted by: Jamie Campbell

Danae Devine has shown remarkable ability and interest in the study of mathematics. She has completed all of our STEM coursework, including our new course Transition to Advanced Mathematics, and is currently taking a course of independent study in Topology, a topic that math majors might not encounter until graduate school. Her work has been uniformly excellent all of these classes. She has also served the department and the school by tutoring her peers in and reading for upper level courses. Danae exemplifies everything we as a department wish for in a student of mathematics, and we wish her well as she continues her studies at a transfer institution!

Danae's Words of Gratitude:

It is an absolute honor to receive this award. I did not feel mathematically inclined upon entering Santa Barbara City College, so never in my wildest dreams did I expect to major in mathematics let alone receive the Outstanding Student Award from the Math Department. I want to thank my family and friends who continue to support me, all of my professors who have been instrumental in setting me up for success as a math student, and the Math Department who have helped me build confidence and have enriched my perspective of mathematics. I have never been so confident in my major choice and I owe a lot of it to my experience at SBCC.
